- ES6, ES2015, Typescript, React, NextJS
- Zod, Framer Motion, Canvas, Leaflet
- Recharts, ChartJS, UI/UX

Databases

- SQL, MySQL
- Prisma ORM

Testing

- Cypress, Vitest
- React Testing Library

SDLC

- Agile, Jira, Notion
- Git, Github Projects
- OOP, SOLID Principles

WORK HISTORY

Front-end Engineer
Decube Data

Sept 2022 – Feb 2024
Kuala Lumpur, MY

- Enhanced user experience for schema catalogue search, streamlining navigation across diverse data sources (eg. Tableau, Snowflake, MySQL), leading to a 2x increase in productivity and a 15% improvement in customer retention.
- Led Amplitude analytics integration to gain insights across data observability metrics, optimising user experience across various data sources and contributing to informed business decisions that drive growth.
- Collaboratively implemented custom components for data governance interfaces, reducing code duplication by 30% and ensuring scalable and maintainable solutions for handling data from multiple platforms (eg. Azure, Databricks).
- Delivered full-lifecycle features, including dynamic data recon tables that visualise job statuses using colour-coded indicators. Implemented robust data display components to organise complex datasets and enhanced user interaction with custom options for editing and viewing details, ensuring smooth data loading, formatting, and an intuitive user experience even in cases of missing data.
- Enhanced team proficiency by 10% through rigorous code reviews, ensuring high standards in data governance and observability.

Front-end Developer Intern
Abundent

Aug 2021 – Sept 2022
Kuala Lumpur, MY

- Partnered closely with UX designer to finalise wireframes from conception to implementation with solid understanding of user experience principles, responsive design and cross platform compatibility.
- Gained proficiency in API testing with Postman to ensure seamless integration and functionality.
- Conducted research and assisted with new business scoping efforts ensuring they complied with industry best practices and company standards.

SIDE PROJECTS

LostTracker - Missing Persons App
Fullstack web application

react-losttracker.vercel.app

- LostTracker is a Missing Persons application built using Vite, React, and TypeScript with Appwrite serving as the backend and database.
- Objective is to help users search for and view profiles of missing persons with infinite scrolling and location-based features using Leaflet. Users can also bookmark profiles and post new missing person profiles.

EDUCATION

- Frontend Developer Career Path Certificate, 2021 - 2022, Scrimba.
- Bachelor of Food Science & Nutrition, 2008 – 2011, Deakin University, Melbourne, Australia.
